

For Immediate Release

Novus Tetra Support System- TSS *Customizable Workstation Solutions For Demanding Needs*

Peterborough, NH, May, 2015 -

Designing functional, attractive commercial spaces with more complex monitor arrangements is challenging. A monitor mounting system must be strong enough to hold multiple screens, easy to customize, and provide a great ergonomic fit. The Novus Tetra Support System (TSS) meets these challenges and has been successfully used in applications such as shared workspaces, control centers, financial desks, hospital examination rooms, and multi-desk university classrooms.

The TSS system's versatility is based on its 4-channel column, which is available in a variety of mounting options depending on your needs. Multiple support arms can be added around the column and stacked along the channels. Support arms are available in four styles to accommodate varying depth, ergonomic positioning, and monitor weight. All TSS support arms are equipped with the Novus Quick Release monitor mount that allows for easy monitor rearrangement without detaching the arms.

“The Novus TSS systems are optimal for commercial work spaces because of their adaptability and easy configuration,” said Shari LaPierre, Sales and Marketing Representative at Dahle North America, Inc. “They’re also ideal for expansion to include multiple monitors and tablets.”

No matter the environment, the Novus TSS system has a configuration to meet the most complex monitor placement needs.

All the personalized workspace options from Novus deliver a clean look, improved ergonomics, and the freedom to easily change your workspace by adding more monitors, tablets, and organizational accessories as necessary. The Novus more space system is designed and developed by Novus Dahle GmbH & Co. KG of Lingen, Germany. The Novus line, introduced in 1949, offers numerous other premium solutions for the modern workplace such as organizational shelving, telephone support arms and more.
