CONTROL ROOMS

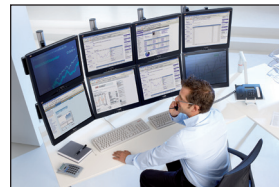

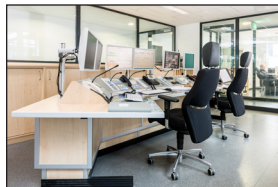

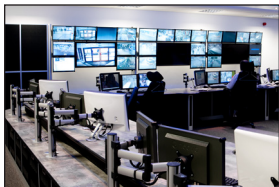

Control rooms are critical in industries where surveillance is vital for security and safety. Utilities, transportation, corrections, and the military are just a few environments where monitoring requires a complex system of view screens. Novus More Space System provides versatile, strong, customizable solutions for any control room design.

More Space Systems' modular TSS monitor arms have been used in control rooms worldwide because of their versatility and strength. German engineered, aluminum and metal TSS components are designed to be durable, reliable, and highly adjustable. View Screens weighing up to 44 pounds can be positioned perfectly so nothing is missed.

For smaller spaces, TSS complete sets are easy to install and adjust. For larger projects, TSS components can be customized for any existing space or incorporated into new plans. Designed around a 4-channel column, it's easy to reconfigure as needs change by rearranging or adding arms and mounts. The options are almost infinite.
